

## Auto Levelling System

### About the Product

Most of the time surface level of the ground is uneven and might be at an angle, which is unsafe for heavy vehicles and equipment operations. Manually leveling these vehicles consumes lot of time, effort and is prone to errors. Using Auto-levelling systems allows users to level these heavy machinery quickly and efficiently at a push of a button.

Our Auto-levelling solutions is designed to provide a one press horizontal levelling of vehicles, caravans & platforms. It includes a 'Controller' unit which should be fixed on to the platform desired to be levelled and a 'Console' unit for user interface.

### Indigenously Developed Electronics

### Key Features

- ▶ Single button press – levelling
- ▶ Available in both 12V and 24V Input and Output Control Voltage
- ▶ Customizable to control 3 to 6 hydraulic jacks
- ▶ Both option of individual and Auto Control of Jacks
- ▶ Remote control using Wi-Fi Console - mounted or hand held
- ▶ Visual Display of the levelling co-ordinates
- ▶ Feedback mechanism for fully extended and/or fully retracted jack condition (Optional)
- ▶ Anti-toppling safety feature
- ▶ Emergency Stop option
- ▶ IP65 enclosures
- ▶ Continuous monitoring of levelled system with a warning if the level goes beyond specific angle
